

How to Submit Your Assignment on Google Classroom

Read Before You Begin

Follow every step carefully. Incomplete or wrongly submitted assignments will not be graded. Read the Important Notes section before submitting.

Part A — What You Need to Submit

You must submit the following single file:

Item	Details
File type	Python source file (.py extension)
File name format	YourName_RollNo_PythonAssignment.py <i>Example: AliKhan_23_PythonAssignment.py</i>
What to include	All questions answered in one single .py file. <i>Separate each question with a comment heading:</i> <i># --- Q1: Divisible by 7 and 5 ---</i>
Deadline	As posted inside the Google Classroom assignment. Late submissions may not be accepted.

Part B — Step-by-Step Submission Instructions

Follow these steps in order. Do not skip any step.

1	Open Google Classroom Go to classroom.google.com in your browser, or open the Google Classroom app on your phone/tablet. Sign in with your school Google account (your school email and password, NOT a personal Gmail).
2	Find Your Class On the Classroom home screen you will see cards for all your enrolled classes. Click on the card for your Python / Computer Science class to open it.

3	Click the 'Classwork' Tab At the top of the class page, click the 'Classwork' tab. This shows all assignments, quizzes, and materials posted by your instructor.
4	Find and Open the Assignment Scroll through the Classwork list to find the assignment titled 'Python Programming Practice Assignment' (or the exact title your teacher used). Click on it to expand the details.
5	Click 'View Assignment' A panel appears on the right side of the screen with the assignment description. Click the blue 'View Assignment' button to open the full submission page.
6	Prepare Your .py File First Before uploading, confirm your file is saved with the correct name: <code>YourName_RollNo_PythonAssignment.py</code> and contains all questions with comment separators. Do this step before clicking anything else.
7	Click '+ Add or Create' to Attach On the assignment page, look at the 'Your work' panel on the right side. Click the '+ Add or create' button. A small menu will appear. Choose 'File' to upload from your device.
8	Browse and Select Your .py File A file picker window will open. Navigate to the folder where you saved your assignment file. Click on the .py file to select it, then click 'Open' or 'Upload'. Wait for the upload bar to complete.
9	Verify the Uploaded File After uploading, your file name will appear under 'Your work'. Click on the file name to preview it and confirm it is the correct file with all your code inside. Do not skip this check.
10	Click the 'Hand In' Button Once you have confirmed the correct file is attached, click the blue 'Hand In' (or 'Turn In') button. A confirmation dialog will appear asking you to confirm. Click 'Hand In' again. Your status will change to 'Turned in'.

Part C — How to Confirm Your Submission Was Received

After clicking Hand In, do ALL of the following checks:

- ✓ The assignment status shows 'Turned in' in green on the Classwork tab.
- ✓ You received a confirmation notification inside Google Classroom.
- ✓ When you reopen the assignment, your uploaded .py file is still visible under 'Your work'.
- ✓ The 'Hand In' button is no longer active — it now says 'Unsubmit', which confirms successful submission.

✓ **Tip: Save Proof of Submission**

Take a screenshot of the 'Turned in' confirmation page immediately after submitting and keep it on your phone or computer. If there is a technical problem later, share this screenshot with your instructor as proof.

Part D — Important Notes & Common Mistakes

- ⚠ Do NOT submit a screenshot or photo of your code. You must upload the actual .py file.
- ⚠ Do NOT submit a .docx, .pdf, .txt, or .zip file. Only .py will be accepted.
- ⚠ Do NOT submit an empty file or a file with only some questions answered.
- ⚠ Do NOT close the page before clicking 'Hand In' — uploading a file does NOT submit it automatically.
- ⚠ Do NOT share your code with classmates before the deadline. Academic integrity policy applies.
- ⚠ Do NOT use a personal Gmail account. You must use your school account to submit.
- ⚠ Do NOT wait until the last minute — internet issues on deadline day are not accepted as an excuse.

Part E — Required File Structure Inside Your .py File

Your file must have a header with your details, and each question must be separated by a comment heading as shown below:

```
# =====  
# Name      : Ali Khan  
# Roll No   : 23  
# Class     : BSCS - Section A  
# Assignment : Python Practice Assignment  
# =====  
  
# --- Q1: Numbers divisible by 7 and multiple of 5 ---  
result = []  
for num in range(1500, 2701):  
    if num % 7 == 0 and num % 5 == 0:  
        result.append(num)  
print(result)  
  
# --- Q2: Factorial without math.factorial() -----  
n = int(input('Enter a number: '))  
# ... rest of your code ...  
  
# --- Q3: Print types from datalist -----  
# ... and so on for each question ...
```

Part F — Troubleshooting Common Problems

Problem	Solution
Cannot see the assignment	Make sure you are signed in with your school Google account, not personal Gmail. Ask your teacher to confirm you are enrolled in the correct class.
'Hand In' button is greyed out	You need to attach a file first. Click '+ Add or create', upload your .py file, and then the button will become active.
Uploaded the wrong file	Click the trash/remove icon next to the wrong file to delete it, then re-upload the correct file before clicking Hand In.
Want to fix code after submitting	Click 'Unsubmit' on the assignment page, make your corrections in VS Code/IDLE, re-upload the new file, then click Hand In again — before the deadline.
Cannot upload from phone	Use Chrome or Safari browser instead of the app. On Android use the Files app to find your .py file. On iPhone use the Files app.
File is not .py format	Open your code in any text editor, choose File > Save As, and type the filename ending in .py. Or right-click the file, choose Rename, and change the extension.
Deadline has passed	Contact your instructor immediately via the Google Classroom private comment section. Explain the reason with a screenshot of your completed work.

Good luck with your assignment!
